October 14, 2026

Dear Hiring Committee,

I am a junior studying Software Engineering at Brigham Young University-Idaho, and I am excited to apply for the 2027 Full Stack Development Summer Internship at WebstaurantStore. I enjoy solving problems, learning new technologies, and developing software that is useful and reliable. The opportunity to work alongside experienced developers on real-world applications while continuing to improve my full-stack development skills is especially exciting to me.

My coursework has helped me build a foundation in C#, Python, SQL, and object-oriented programming. In CSE 210, I created an adventure game in C# that used classes, inheritance, and polymorphism to implement different enemies, weapons, and game behaviors. More recently, I have been developing web applications using React, JavaScript, and Supabase. I have also completed a SQL course and gained additional experience working with relational databases through Supabase. One of my current projects is a team application where I have practiced using Git and GitHub to collaborate with other developers and manage changes to shared code. These experiences have strengthened my understanding of software development and increased my interest in building full-stack applications.

I also work in BYU-Idaho's Tier 3 Classroom Technology IT department, where I support Crestron systems and other integrated classroom technology. My responsibilities include troubleshooting hardware, uploading programs and configurations, and ensuring that classroom devices communicate properly over Ethernet. I regularly document technical issues, troubleshooting steps, and solutions. I also communicate directly with professors and other users, often explaining technical problems in clear, simple terms. This experience has strengthened my problem-solving abilities and taught me how to approach unfamiliar technical challenges independently while knowing when to ask for help.

I am particularly interested in WebstaurantStore because of the opportunity to contribute to software that directly impacts customers while learning from an experienced engineering team. I would be excited to build on my experience with C#, JavaScript, and SQL while developing stronger skills in ASP.NET Core, React, automated testing, and enterprise-scale software development. I am eager to receive feedback, contribute to a collaborative team, and continue growing as a software engineer.

Thank you for your time and consideration. I would appreciate the opportunity to discuss how my technical foundation, troubleshooting experience, and willingness to learn could contribute to WebstaurantStore's development team.

Sincerely,
Kallen Joos
